SINGLE wall

PE

Paper cups

Our paper cups consist of approximately 95% paper fiber. The other 5% of the cup consists of a PE (Polyurethane) coating to ensure the cup is suitable for hot and cold drinks.

The coating on paper cups is a type of protective layer that prevents liquids from passing through the paper. This layer can be made of PE or PLA. Each type of coating has its unique properties in raw material and therefore also in the way in which it can be broken down or reused. PE coating is made from petroleum and is suitable for recycling.

HOT cups

Biodegradable cups

PLA coated coffee and soup cups are made from quality (FSC® certified) paper fibers combined with a completely biodegradable coating made from PLA (Polylactic acid).

To make these paper cups oil, moisture and fat resistant, they are provided with a PLA (corn starch) coating instead of a plastic coating (PE). Responsible paper and starch from corn, among other things, now serves as a bio based raw material for the production of our cups.

Because these coffee and soup cups are made of 100% compostable paper, the product itself can be used again as food for new crops after use, according to the cradle to cradle principle.

Our paper cups are taste-neutral, oil, moisture and fat resistant, suitable for use up to 90°C and have a durable appearance. The paper cups can also be provided with their own custom made printing designs.

DOUBLE wall

Double-Wall PE and PLA

Double-wall paper cups are made of two-layer paper with a small air pocket in-between. Therefore, the cup protects against hot temperature and can be comfortably hold in your hands. The drink will stay warm for a longer period of time.

Double-wall cups are made of high quality paper, extremely strong and completely waterproof. They are available with a PE- (recyclable) or PLA- (biodegradable) coating.

RIPPLE wall

Ripple-Wall PE and PLA

When it comes to serving a hot drink, our range of Ripple-Wall Cups are an ideal solution. Unlike a smooth surface cup, this cup is designed with a ripple effect that works as an insulator which does not let the heat pass through the walls on the outside of the cup. It also makes it easier for consumers to hold it without having to use a cup sleeve. The ripple wall enhances the grip while reducing the chances of slipping and spilling coffee or any hot beverage. With a stylish ripple design in two colors and also a Biodegradable version, they not only perform well but look modern and can also be environment friendly.

Soup cups PE and PLA

White Soup Cups and lids are a great combination and ideal for soup, dessert, and ice-cream. Whether your content is hot or cold, it helps to keep it fresh. The Bio Kraft degradable Soup Cup and Lid are also a perfect combination to keep your soup fresh. The use of kraft paper here helps to reduce the effect of steam on the content by not getting it condensed. Also of course by using the soup lid and not letting all the heat out.

OVERVIEW cups & accessories

Standard Collection

In 2022 GKB-International BV joined forces with the Van de Velde Packaging Group. By joining forces GKB and Van de Velde Packaging Group aim to become the largest producer of cardboard cups in Europe.

In addition to our own production of standard paper and custom made cups, there is also a wide range of plastic cups, coffee lids, stirrers, sugar- and creamer sticks and much more.

We like to say nothing we can't design or print, the possibilities are endless, but take a look yourself or feel free to contact us with any of your questions, enjoy!
